| Approved By (Name / Title) |                    |
| Approval Signature / Date  |                    |
| Next Review Date           |                    |

*This controlled document is maintained under the Goodness Gardens Food Safety & Quality Management System and the PrimusGFS audit scheme. It must be reviewed at least annually, after any deviation or audit finding, and whenever processes, products, or regulations change. Printed copies are uncontrolled.*

### 1. Objective

Establish a corrective and preventive action (CAPA) system so every non-conformance is investigated to root cause and corrected to prevent recurrence.

### 2. Scope

All non-conformances: internal/external audit findings, deviations, customer complaints, pest activity, environmental positives, recalls, and regulatory findings.

### 3. Responsibilities

- FSQA Manager owns the CAPA log and verifies effectiveness.
- Department managers implement corrective actions by the assigned due dates.

### 4. Procedure

- Record each non-conformance on a CAPA Report (1.03.03-01R) and enter it in the CAPA Log (1.03.03-02R) with a unique number.
- Take immediate correction first: contain, hold, and segregate any affected product per 5.03.
- Perform root cause analysis (5 Whys / contributing factors); 'employee error' alone is not an acceptable root cause.
- Define corrective action(s) with an owner and due date; preventive action where the cause could affect other lines or sites.

- FSQA verifies implementation and, after an appropriate interval, verifies effectiveness before closing.
- CAPA status is reviewed monthly; overdue items are escalated to site management.
- In this system: deviations auto-open a CAPA assigned to the FSQA Manager, and the incident cannot close until the RCA is complete and all actions are closed.

## 5. Records

- CAPA Reports; CAPA Log; effectiveness verification records.
