This controlled document is maintained under the Goodness Gardens Food Safety & Quality Management System and the PrimusGFS audit scheme. It must be reviewed at least annually, after any deviation or audit finding, and whenever processes, products, or regulations change. Printed copies are uncontrolled.

1. Objective

Enable rapid and complete recall or withdrawal of affected product.

2. Scope

All product packed or shipped by GG, all sites.

3. Responsibilities

- The Recall Team is led by the FSQA Manager with operations, sales, and management members named in the Recall Plan.
- Only designated spokespersons communicate externally (1.07-TRR-01-MED).

4. Procedure

- Traceability: every lot carries a traceability lot code (TLC) linking seed/source, production date, line, and customers shipped (FSMA 204 KDEs per 1.08.01-FSMA204).
- On a potential recall trigger (complaint, test result, supplier notice, regulator), the Recall Team convenes within 2 hours and classifies the event (Class I/II/III or withdrawal).
- Affected lots are identified, quantified (Recall Inventory Log 1.07-TRR-01-RIL), and customers notified using the Recall Communication Letter (RCL) and Recall Information Form (RIF).
- Product on hand is held and segregated; disposition is documented.
- Effectiveness checks confirm recovery percentage; regulators (FDA RES) are notified as required.

- A mock recall is performed at least annually targeting >99% recovery within 2 hours, documented on the Mock Recall Cover Form (MR) and Product Recall Log (PRL).
- Post-recall, root cause and CAPA per 1.03.03.

5. Records

- Mock recall records; recall file (notifications, logs, disposition, effectiveness checks).
